

**SF₆ gas insulated vacuum recloser
for power distribution system
thru 15kV, 27kV, 38kV**

General features

The ENTEC EVR SF6 gas insulated vacuum recloser is an electronic automatic circuit recloser designed for the highest mechanical and electrical reliability.

The unique design of auto recloser meets the latest technology with the combination of vacuum interruption, bi-stable magnetic actuator sealed in a stainless steel tank with SF6 gas as the insulation medium and a microprocessor based control.

This means completely oil free, environment free design and no hazardous products are produced during the interruption.

The mechanism is operated by a magnetic actuator which the opening and closing solenoid is respectively equipped with.

As the actuator uses magnetic latching, the mechanical parts are drastically reduced, resulting in high reliability and maintenance free operation during the life time.

The operation of recloser uses only battery power sources or a low- voltage power source supplying from low voltage distribution line by utility or potential transformer and a fully charged battery. Trip and trip and close capacitors provide recloser operation over hundreds of open-close operations as the back-up power upon loss of control power.

This allows the independent recloser operation by the high voltage supply, the low voltage supply and the battery and capacitor. EVR recloser also has the dead line operation capability required for SCADA and distribution automation.

The control cubicle is heat insulated with polyurethane to minimize temperature variation and protected from solar heating as adopting sunshine cover to the outside and heat insulation inside of control cubicle.

Vents of the control cubicle are screened against vermin's entry and door is sealed with a seamless rubber gasket.

Especially all electronic parts built in microprocessor control are fully protected from entry of moisture and its condensation so as to be used in any places such as tropical, moderate and severe humidity .

A current transformer and a capacitive voltage transformer are moulded in the horizontally arranged epoxy bushing.

These sensors provide to incorporate the functions of an overcurrent protection relay, a ground fault relay, a sensitive earth fault relay and to measure line current, voltage, real and reactive power, power factor, demand Watts and VARs, frequency and so on.

All measured values and event records are stored in the microprocessor control for transmission or off-line analysis.

The recloser functions, settings and data records are programmable and readable with PC or remote communication.

The microprocessor based electronic recloser offers superior co-ordination and application capability meeting IEEE C37.112, IEC255-3, McGraw Edison protection curves and designed in accordance with ANSI / IEEE C37.60 and manufactured under a quality system conforming to ISO 9001.

Personal computer based on software package supports on-line and off-line programming, monitoring, measuring and control of recloser via RS232 port.

All telemetry communication can be supported with DNP3.0 protocols based on IEC870-5 and Modbus

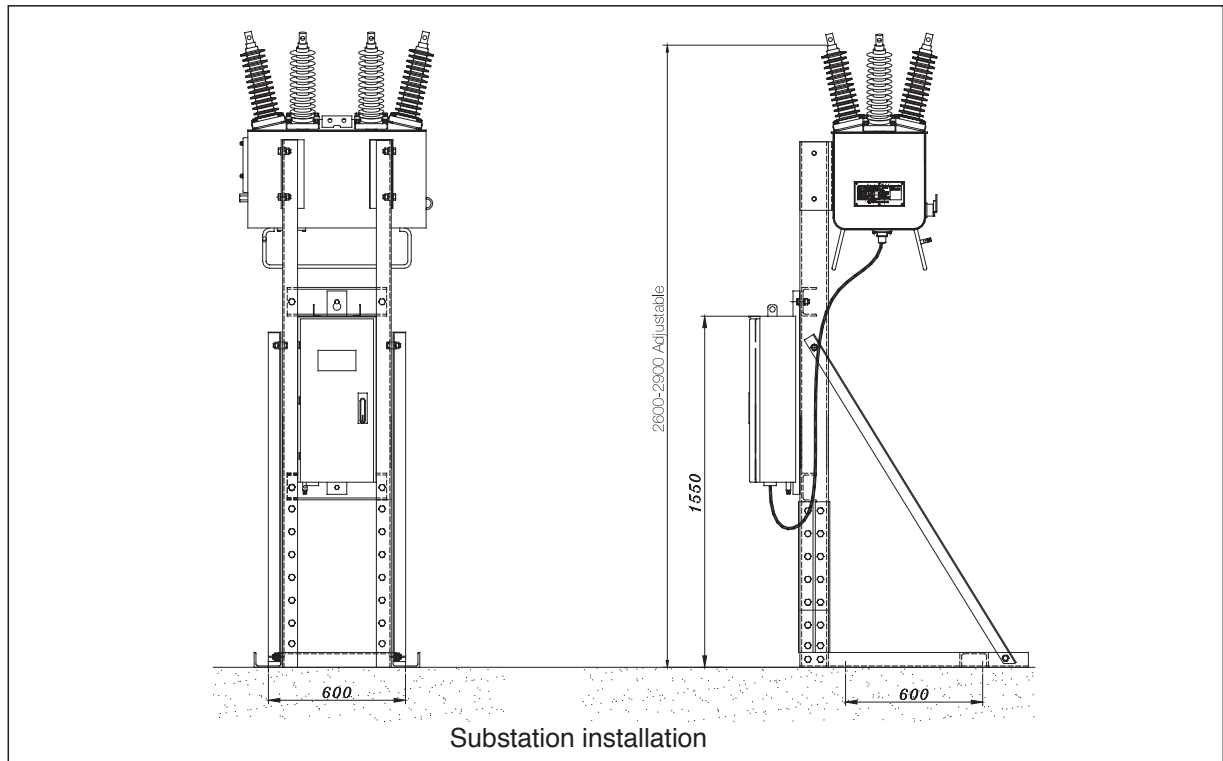

■ The advantages of magnetic actuator

- Elimination of mechanical latches and associated linkage provide reliable, trouble free operation
- Dramatic reduction in moving parts provides maintenance free and ten thousand operations without periodic maintenance
- Compact, light weight and minimum mounting space
- High response time in instantaneous reclose
- Reduced installation and operating cost

Key features

1. Reliable single moving parts with bi-stable magnetic actuator.
2. All mechanical parts sealed in stainless steel enclosure filled with with SF₆ gas.
3. Each of the internal or external power sources is available upon client's requirements.
4. Vacuum interruption with no hazardous arcing products.
5. EPDM bushing with mold-cone lead or silicone rubber bushing available.
6. Light weight design for easy pole mounting and substation installation.
7. Maintenance free over 10,000 operations.
8. Manual trip and lockout provision by a hot stick operation on the ground level.
9. Pressure relief device for internal arc withstand.
10. Information input and retrieval via built-in key pad or a computer using the RS232 port.
11. Microprocessor controller protection
 - DNP 3.0, Modbus communication protocols and SCADA capability
 - Record of operation, fault and waveform data for line and load profile data
 - Three curve standards: IEEE, IEC and 37non-standard inverse time curves
12. Multi-function metering
13. Capacitive voltage divider is provided for measuring(option).

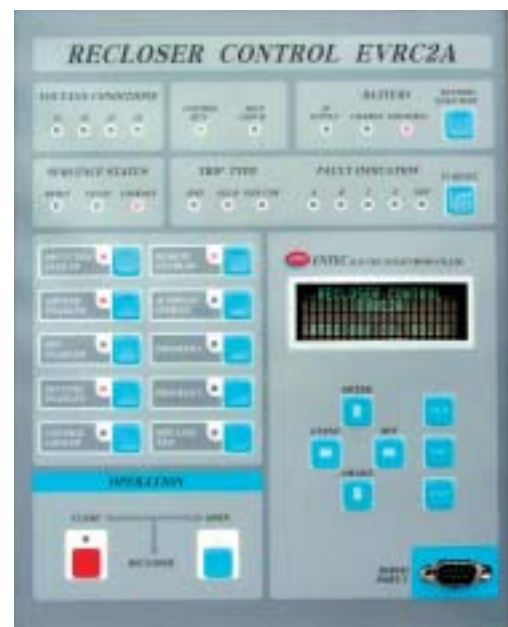

Control & Protection

- Microprocessor based recloser control technology provides complete distribution system protection and control with local and remote operation.
 - IEEE C37.112, IEC255-3, McGraw Edison protection characteristics are provided with 37 time-current basic curves that are changeable by reprogramming with vertical shift and constant time adder and selected and modified with the T-C characteristics from the local keypad or via the RS232 port by personal computer.
 - Recording of historical fault data
Event recording of fault magnitude and history data provide system analysis information for need of line maintenance through transient faults and permanent outages.
 - Percentage display of vacuum contact life shows the anticipated contact life depending on the size and number of faults interrupted.
 - Current metering monitors instantaneous line current values showing on the control panel LCD display.
-

-
- Membrane keypad and LCD display perform the function for data input or retrieval, date display and status indication.
 - Users can operate Close and Trip, and also control EVRC2A with key buttons on the user interface panel; Protection Enabled, Ground Enabled, SEF Enabled, Recloser Enabled, Control Locked, Remote Enabled, Alternate - Settings, Program 1, Program 2, Hot line tag.
 - RS232 communication link allows the function for data input or retrieval using a personal computer and reprogramming or modification of time-current curves of protection can easily be done at any time via the RS232 port.
 - Sequence co-ordination offers the function of preventing unnecessary operation of the backup recloser when two more reclosers are connected in series.
 - Minimum response time of 45ms specifies the fastest clearing time for the line protection.
 - Cold load pick up characteristic prevents the recloser to trip from the expected transient current when manual closing of auto recloser locally or remotely is applied for the healthy system.
 - Two programmable setting groups
 - Remote control facility.
 - Programmable settings can be made easily and quickly through the keypad on the front control panel or personal computer.
 - Recloser duty monitor provides duty cycle information which is accessible via the keypad, RS232 port and communication links which measures and records duty cycle.
 - Security coding of selected operations ensures that only authorized personnel can access and change control operating settings and characteristics.

User Interface Panel

Microprocessor Based Recloser Control EVRC2A

Features

- Reduced distribution automation costs
- RTU and control mounted in one control cubicle with space for radio and modem
- DNP 3.0, Modbus communication protocols and SCADA capability
- 12Vdc ~ 24Vdc auxiliary power available for modem or radio
- Voltage, current and power metering
- Record of operation, fault waveform data for line analysis and load profile data
- Un-interruptable power supply with trip and close
- Inner heat insulation for polyurethane foaming
- Microsoft Windows-based EVRC2A interface software

EVRC2A cubicle

Average load profile & waveform

Fault events & 15 Cycles waveform

Protections

- User TCC construction capability
- Three curve standards: IEEE, IEC and 37non-standard inverse time curves
- Protective settings in nonvolatile memory during power failure
- Delay time overcurrent protection(51P, 51G)
- Instantaneous overcurrent protection(50P, 50G)
- Negative sequence overcurrent protection(46)
- SEF protection
- Source and load side synchronism check
- Cold load pickup and sequence coordination
- Underfrequency and load shedding(81)
- Undervoltage, overvoltage detection and alarm(27,59)
- Directional controls(67)

Editor for TCC modification

Mutli-metering

- Current
- Voltage
- Measures KW and KWH, power factor, demand Watts and VARs and frequency
- Load profile data & oscillogram

Remote Communication

- RS-232 ports
- DNP3.0 protocol based on IEC870-5, Modbus
- Built in RTU
- Complete remotely access for recloser functions, settings metering and data records

Technical EVRC2A Control Specifications

RATINGS

Rated frequency	50 or 60 Hz
Control voltage	110/220 AC

ENVIRONMENTAL

Ambient temperature range	Storage -40°C to +85°C Operation -25°C to +70°C
Degree of protection	IP65
Insulation test voltage	2kV 50/60Hz, One minute
Impulse voltage withstand	6kV Peak, 1.2/50 μ s ANSI C62.45, IEC 61000-4-5
Interference test withstand	SWC ANSI C37.90.1, IEC 61000-4-4
Radio frequency interference	IEC 255-22-3 Class III, ANSI C37.90.2

GENERAL PROTECTION (CT ratio 1000:1A)

Phase time overcurrent	CT ratio \times (0.04~3.20), (40~3200A at CT 1000:1)
Phase instantaneous overcurrent	CT ratio \times (1.00~20.00)
Ground time overcurrent	CT ratio \times (0.02~3.20), (20~3200A at CT 1000:1)
Ground instantaneous overcurrent	CT ratio \times (1.00~20.00)
Sensitive earth fault	CT ratio \times (0.005~0.160), (5~160A at CT 1000:1)
Phase and ground time curves	IEEE C37.112, IEC255-3, User programmable curves 37 non standard inverse time curves

RECLOSE

Reclose times	Programmable from 1 to 4
Reclosing(Dead) times	1st reclose : 0.5-600 sec in 0.01sec steps 2nd reclose : 1.0-600 sec in 0.01sec steps 3rd reclose : 1.0-600 sec in 0.01sec steps 4th reclose : 1.0-600 sec in 0.01sec steps
Reset (Reclaim) times	1-600 sec in 1sec steps

METERING (At rated voltage and current)

Current	\pm 1%	
Voltage	\pm 1%	(\pm 2.5% : CVD)
Watt hours	\pm 3%	(\pm 5% : CVD)
Vars hours	\pm 3%	(\pm 5% : CVD)
Demands	\pm 3%	(\pm 5% : CVD)
Power factor	\pm 0.02	(\pm 0.05 : CVD)
Frequency	\pm 0.02Hz	(\pm 0.05Hz : CVD)

RECORDING

Waveform capture	: 16 events with 15 cycle
System event	: Last 500 events
Diagnostic event	: Last 100 events
Load profile	: Last 1024 events, 42 days/ 60Min.(5,10,15,20,30,60, min interval)
Counter	: Trip, fault, system restart
Recloser wear	: phase A,B,C

Construction

	A	B	C	D
EVR-1	300	780	920	430
EVR-2	320	780	1030	430
EVR-3	320	890	1060	480

Electrical ratings

Description	Unit	EVR-1	EVR-2	EVR-3
Rated maximum voltage	kV rms	15	27	38
Continuous current	A rms	400/630	400/630	630/800
Frequency	Hz	50/60	50/60	50/60
Short circuit interrupting current	kA rms	12.5/20	12.5	12.5/16
Short time withstand current. 3sec	kA rms	12.5/20	12.5	12.5/16
Making current	kA peak	32.5	32.5	32.5
Cable charging interrupting current	A rms	5	5	5
Transformer magnetizing interrupting current	A rms	22	22	22/28
Basic impulse withstand voltage(1.2×50μs)	kV crest	110	125(150)	170
Power frequency withstand voltage, dry	kV	50	60	70
Power frequency withstand voltage, wet	kV	45	50(60)	60
- Operating control voltage		AC 110V, 220V external sources		
- Ambient temperature	°C	-25 to 70		
- Degree of protection		IP65		
- Maximum mechanical and electrical operations(c-o)	No	10,000		

- Other ratings is available upon request.
- ENTEC reserves the right to change the design and specification without notice.
